

Enable File Sharing with Red Hat® Storage Server and ownCloud

Save over 35% when you buy the Red Hat® Storage Server and ownCloud Enterprise Edition bundle

File sync and share capabilities are now considered essential by an increasingly mobile and productive work force. While consumer-grade, cloud-based file sync and share solutions often provide a convenient data storage medium, they are outside of corporate control and data policies, and can represent a serious concern for enterprise IT departments. To address these shortcomings, ownCloud and Red Hat® have collaborated to provide a cost-effective and scalable file sync and share solution that is deployed on-premises and controlled by the enterprise. With ownCloud and Red Hat® Storage Server consolidated on compact high-performance x86 servers, organizations can affordably scale their private file sync and share solution while providing the ease of use of a public cloud.
