

# ownCloud for Windows Network Drives

Universal file access made easy & secure

The Windows network drive is a convenient location for file sharing within your network. Unfortunately, accessing these files from remote locations, such as the airport, home office or train, is nearly impossible without an internet connection and then, often possible only through a VPN connection. To address the growing need for such access, many users are turning to products like Dropbox to collaborate inside and outside the organization. This opens your organization to considerable risk and removes all IT visibility and control over sensitive corporate data. With ownCloud, users can now leave Windows network drive files where they belong, on your network, and still enable remote file access for end users no matter where they happen to be working.

## Benefits

- Provide access to Windows network drives from any device
- Leave files in Windows network drives where they remain subject to governance policies
- Maintain IT control and visibility AND provide end users the experience they demand

to enable validation. Once configured, ownCloud treats the Windows network drives as an external storage location, enabling mobile, web and sync client access, sharing and synchronization. Administrators may choose to integrate one, or multiple network drives within a single ownCloud instance.

- **Everywhere access.** Users have access to their Windows network drive document folders and files within the ownCloud web and mobile interfaces. They can even sync selected folders from the Windows network drive to their desktop with the ownCloud desktop client.
- **Flexible control.** Administrators can integrate SAML and Active Directory for user authentication, or deploy a custom mechanism.
- **Rapid integration.** Configuration and validation can take fewer than 5 minutes.
- **Automated synchronization.** Updated files are bi-directionally synced automatically. Optionally, users may be allowed to connect their own Windows network drives.
- **Consistent security.** While Windows network drives are accessed via ownCloud, Windows network drive access controls are followed. For example, users with read only

access on the Windows network drive would also have read only access in ownCloud.

## Technical specifications

Requires ownCloud 7 Enterprise Edition running on a Linux server. Network drives hosted on Windows Server 2008, 2012, Windows 7 or 8, as well as Linux based Samba (emulating Windows) are supported.

## About ownCloud Inc.

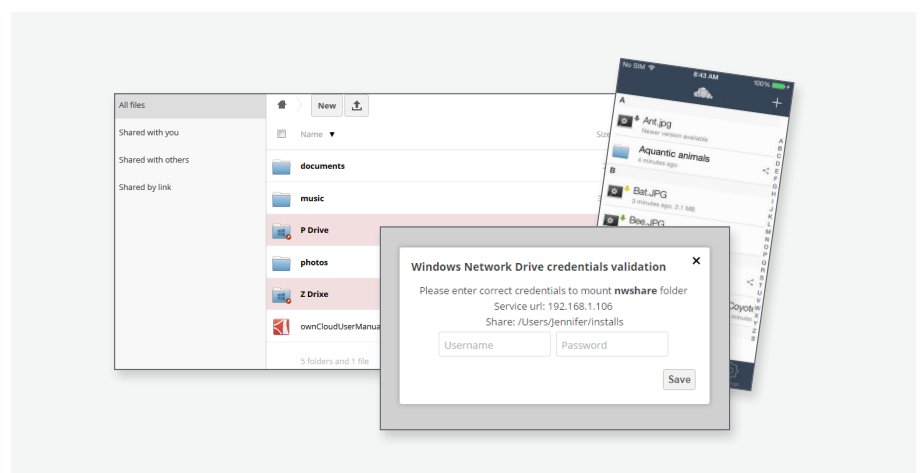

Based on the popular ownCloud open source file sync and share community project, ownCloud Inc. was founded in 2011 to give corporate IT greater control of their data and files – combining greater flexibility, openness and extensibility. Company headquarters are in Lexington, MA, with European headquarters in Nuremberg, Germany. For more information, visit: <http://www.owncloud.com>.

Copyright 2014 ownCloud All Rights Reserved. ownCloud and the ownCloud Logo are registered trademarks of ownCloud, Inc. in the United States and/or other countries.

By leveraging ownCloud Enterprise Edition users can securely access and sync all of their Windows network drive content no matter where users are working, no VPN required.

## Capabilities

The Windows network drive integration provides ownCloud Enterprise Edition subscribers a mechanism for connecting ownCloud users to their Windows network drives and documents. The administrator configures the app in the ownCloud administration interface as well as the requisite credentials

Admins connect Window network drives in the ownCloud administrator interface, and then the drives appear in ownCloud user accounts as folders and file trees.
